

## HUDK 4050 Reflection Essay

At the end of this semester, you will write up a short reflective essay on your takeaways, reflections, and future plans in the form of a short essay.

**Expectations:** Write something about what you have learned in this semester in a narrative format instead of bullets. Don't make it too long. Keep it to 1-2 pages (500 words minimum but 750 words maximum).

**Submission:** You will NOT submit this document to Canvas. You WILL include this document as part of your portfolio (either in your markdown file or on your GitHub).

Open with an introduction and close with a conclusion so the paper is coherent overall, focusing on your learning experience this semester. You don't have to address every question below; these prompts are designed to facilitate your writing.

### Pre-course experience

- What brought you to this course? What is your expectation of taking this course?
- What was your background before taking this course?
- What is your personal learning goal(s)/objective(s) in this course? Does your goal or objective change over time?

### Course experience

- Briefly describe what you have learned or what you have done in this semester.
- What is your biggest take-away from this course?
- Which part of the engagement experience is your favorite at this point?
- Which part of the course are you finding the most challenging? How did you approach this challenge?
- How have you applied skills or abilities gained from this course to solve problems or explore issues?

### Looking forward

- Have you achieved your learning goal(s) or objective(s)?
- In what ways has this course increased your curiosity or awareness about new content or issues?
- What did you learn about yourself and/or others as a result of participating in this engagement experience?
- What connections, if any, are you seeing between this engagement experience and your career path?
- What else you might want to work on in the near future?

# The Influence of Peer Effect in Sports Behavior Among Youth Students

Group: Honglin Zheng, Zhilin Zhai, Yining Liang  
HUDK 4050: Core Methods in Educational Data Mining  
Professor: Lucas Liu

1

## Introduction

- Motivations influence a person's behavior in physical activity.
- Peer Effect
- Figure out:
  - To what degree does peer effect influences people's physical activity behaviors?
  - Youth Students
  - Methods: social networking analysis, Clustering, and Linear Regression Model in Python
- Hypothesis: There is a positive correlation between the peer effect and the youth students' sports behaviors.

2

# Introduction

## The Definition of 'Peer Effect':

Students can influence each other and educate themselves by their peers; Peer effect exist when a person's behavior is affected by his or her peers.

3

# Introduction

- **Shining Light model :**

Positive externality of 'peer effect' that a few students with outstanding performance in class could positively enhance peers' performance by inspiring all students to increase their achievement

① Lazear, E. P. Educational production. (2001). The Quarterly Journal of Introduction to Economics, 16(3), 777-803.

② Hoxby, C.M. (2002). The Power of Peers: How Does the Makeup of a Classroom Influence Achievement? (Research). *Education Next*, 2, 57.

4

# Introduction

- **Bad Apple Model :**

Negative externality of 'peer effect' that students with poor academic outcomes might negatively influences the academic performance of peers

① Lazear, E. P. Educational production. (2001). *The Quarterly Journal of Introduction to Economics*, 16(3), 777-803.

② Zimmerman, D.J. (2003). Peer Effects in Academic Outcomes: Evidence from a Natural Experiment. *Review of Economics and Statistics*, 85, 9-23.

5

# Literature Review

## **Correlation between 'peer effect' and students' physical activities.**

- Stearns, J. A., Godley, J., Veugelers, P. J., Ekwaru, J. P., Bastian, K., Wu, B., & Spence, J. C. (2018). Associations of friendship and children's physical activity during and outside of school: A social network study. *SSM - population health*, 7, 008-8. <https://doi.org/10.1016/j.ssmph.2018.10.008>

6

## Study design

Participants: adolescents in grades 7-9 at a same school

Sample size: 100 students

Assess at two time spots:

1. in the first week of a new semester
2. in the last week of the semester

7

## Independent variable

Peer ( friend ) relationship

- ☐ All students name up friends in this school, evaluate the friendship quality in the scale of 1-5;
- ☐ Only count if nominate twice (remain the relationship for a semester);
- ☐ Assess before and after the semester;
- ☐ This variable has directions.

8

# Dependent variable

## Physical activity

- ☐ "How many hours do you spend on playing sports or doing exercise in a typical week?"
- ☐ Assess after the semester

9

# Control variables

## 1. environmental influences(assess before the semester)

- ☐ "How many hours do the parents/guardians play sports or do exercise in a typical week?"
- ☐ "Do you have access to public recreational facilities in your neighborhood?"

## 2. Physical activity (assess before the semester)

10

## Data analysis-step 1

1. Build a directed adjacency matrix based on the friendship with the average friendship quality as weight. If student  $i$  named student  $j$  as a friend, with a friendship quality mean  $q$ ; then the  $ij$  entry in the matrix will be a  $q$ .
2. Use Python to implement the social network analysis:
  - a. Calculate the density, centrality to explore the overall characteristics of friendship at school. Delete isolated nodes (missing data).
  - b. Detect communities(groups).
3. Implement ANOVA to find any between-group differences in physical activities.

11

## Data analysis-step 2

1. Calculate the average physical activity of an individual's nominated friends.
2. Use Python to implement a linear regression analysis:

$$Y = \beta_1 x_1 + \beta_2 x_2 + \varepsilon$$

- $Y$ : physical activity;
- $x_1$ : friends' average physical activity;
- $x_2$ : control variables
- $\varepsilon$ : error

12

## Hypothesis

In social networking analysis: the main effect of group is significant, which means that there is between-group difference for the physical activities.

In linear regression analysis: in the regression model, friends' average physical activity can predict an individual's physical activity after controlling for the pre-test physical activity and environmental factors.
